Lecturer Feedback.

File Type Restriction and display Message error if file exceeds limit.

I implemented a script that is triggered when the input is changed to retrieve the file and check if the file size is bigger than 4MB, if then it will remove the file and trigger an alert (pop-up message) to inform the user.

Ensure if files are saved with the corresponding Claim.

When a file is added, it, program generated a unique file name that works similarly to a primary key, so that each file have a unique name. This name is inserted to the table when the user inserts a new claim.

Ensure that the document names are visible for the Managers' and Programme Coordinators' views.

The document is not visible, however, if the claim row has a document name, o que means that it has a document, then a button will be available para the users to download the document.
